Eggleston Wood

What is special?

This woodland came into Durham County Council ownership when the sand and gravel quarry closed in the mid 1960s. Since that time the trees have seeded into the quarry and we now have mixed broadleaved woodland.

Eggleston Burn runs along the western edge beside the old sand quarry. In the summer sand martins nest in the cliff face and can be seen from the bottom path. Other birds to watch for are dippers and birds of prey such as red kite and buzzard. Deer and badger occasionally stray through the wood and many rabbits burrow through the soft sandy soil. Every now and then an otter is sighted on its journey along the river.

There are fantastic views over Teesdale and Mickle Fell, which, standing at 788 metres, is the highest hill in County Durham.

Eggleburn Wood

Accessibility statement

The path is an average of 1.5 metres wide. It consists of bare earth, grass and a short section of unsealed surface with some large stones. Large stones and tree roots are present, particularly on the undulating section to the east of the site. There are various gradients but only those which are particularly steep are marked.
